

The 'guts' of grass

what's in spring pasture?

Animal requirements

A 400kg cow at peak lactation requires:

175MJME/day. At 11.5MJME - Spring pasture

This is 15kgDM/day = 100kg pasture (wet weight) = 2.7 kg crude protein = 5.25kg fibre (NDF) = 2.5kg of effective fibre
